TESLA

OVERVIEW & GUIDANCE

This document catalogs commercial thermoplastic materials that have been certified to meet Tesla material grade requirements for delivery against their respective Tesla Materials Specifications. It is applicable for the selection of raw materials delivered directly to Tesla and to its suppliers for the production of molded plastic components.

The following principles apply under all circumstances.

1. **Laws**. Materials selected from this list must meet all legal and regulatory requirements valid in the country of usage.

2. **Language**. Only the English language version of this text shall be binding.

3. **Standard Obsolescence**. It is the responsibility of the supplier to ensure that the most current version of this document is employed.

4. **Materials Nonequivalence**. This document makes no representations regarding the equivalency or interchangeability of any two materials approved to a given grade. Materials of the same grade may vary measurably in properties critical to part function, appearance, or manufacturability. It is incumbent upon the supplier to ensure that the selected raw material satisfies all part-level requirements.

5. **Part Validation**. Materials approval per this document does not constitute endorsement for use in any application or guarantee part fitness to function. Materials suitability for service in a particular application may only be confirmed by component-, system- or vehicle-level testing.

6. **Processability**. It is incumbent upon the molder to ensure that the selected raw material be processable with production tooling on production equipment. The characteristics of each material must be taken into account prior to tooling. Should a material change be necessary, molding trials shall be implemented to confirm compatibility with existing tooling.

7. **Due Care**. The selection of a material from this list does not indemnify the molder against liability arising from poor molding practice. Manufacturer-recommended process specifications must be followed under all circumstances unless otherwise directed or approved by Tesla Materials Engineering.

8. **Appearance**. Additives imparting color or other visual effects may be compounded into a raw material or added at the press by masterbatch. Selection of a qualified color-matched raw material per this document does not constitute appearance approval. All materials, components and assemblies deemed as "appearance items" must match the corresponding master sample for color, gloss and texture as indicated on the applicable released engineering information as approved by Tesla Design & Styling and in accordance with the Appearance Approval procedure.

9. **Regulatory Compliance**. All materials, components and processes used to produce parts delivered to Tesla, or to be part of products delivered to Tesla, must be registered to the International Material Data System prior to being supplied for production usage.
